Want a smoother pulmonary recovery?

Pulmonary Pre-Care Program an extension of Pulmonary CareLink

Pulmonary Pre-Care Program Highlights:

- Staff-led private sessions offered in-person, or virtually, from the comfort of the patient's home.
- Early relationship building prior to surgery, contributes to greater compliance with post-procedure plan of care.
- Continuity of care with same team members.
- Education and interventions tailored to your patient's specific needs.
- After "shelter at home" orders and less access to care leading to further deconditioning of your patients, we can help prepare them physically and educate them on their procedure.
- Early exposure to our services will help increase familiarity and allow patients more time to ask questions and prepare for recovery at home.
- Educate your patients on a home exercise program that will lessen atrophy and increase strength prior to surgery.
- COVID-19 education for patients.
- COVID-19 testing prior to surgery date (only available in certain markets).
- Telehealth capabilities via HRS and Zoom, even prior to surgery, if needed, to monitor status.
- Pre-arrange any needed equipment to the patient's home.
- Medication teaching.
- Home safety assessments to ensure a safe environment and to reduce fall risks.
- HIPAA Compliant.
